AGILE MANAGEMENT IN HTML :-

Agile management is a flexible, iterative approach to managing projects, particularly in software development. It focuses on collaboration, adaptability and customer feedback. Altough Agile itself is a management methodology, you can use HTML, CSS and Javascript to create tools for manageing Agile projects, such as:

1. Kanban Boards
2. Sprint planning Tools
3. Burndown Charts
4. Daily Standup Dashboards

Kanban Boards :
Visual task management boards (To Do, In progress, Done)

Sprint planning Tools :
Interface for organizing and tracking sprint process

Burndown charts :
Graphs showing work remaining vs time limit

Daily stand-up Dashboards :
Web apps for logging daily updates and blockers.

KEY BENEFITS OF USING HTML FOR AGILE MANAGEMENT

(i) EASY TO SHARE:

Web based tools can be accessed by teams from anywhere

(ii) CUSTOMIZABLE:

HTML-based dashboards can be tailored for specific Agile needs

(iii) INTERACTIVE FEATURES:

Java script can add drag and drop tasks, charts and more
